

Targetzman is same as Huntsman except that Targetzman has an adjustable rear sight and a thumbrest on left grip panel.

## COMPONENT PARTS OF THE HUNTSMAN PISTOL

From the original instruction sheet that came in box with Targetzman purchased new in Dec. 1966. (Thanks to Del Kelley for the PDF file.)

The Huntsman and Targetzman, like the Woodsman models of the same period, had injection molded, black plastic grips (as shown here) until 1960. Thereafter the grips were made of checkerered walnut.

This type magazine catch (above) was used only on the Challenger and the early versions of the Huntsman & Targetzman. Later versions had the same snap catch type magazine retainer as was used on all of the third series Sport, Target, and Match Target Woodsman models.
